

## Annual report - Missouri Botanical Garden (Volume 5)

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894. Excerpt: ... MATERIAL FOR A MONOGRAPH ON THE TANNOIDS, WITH SPECIAL REFERENCE TO VEGETABLE PHYSIOLOGY. BY J. CHRISTIAN BAY. In the Transactions of the Academy of Science of St. Louis, Volume vi, No. 6, was published my material for a monograph on inuline. This paper, the second of a series of similar bibliographical contributions that I contemplate bringing together, deals with the tannoids, long known as a very important constituent of the cells of many plants. As this bibliography is particularly written from the standpoint of vegetable physiology, much of the purely chemical and technical literature has not been taken into account, though the list is intended to be complete, with this exception, up to the end of 1890. Most of the references in these papers were collected in 1891, but for certain reasons I have been unable to print any of the papers until the present time. Meanwhile, several important papers have been published by Bramer, Nickel, and Reinitzer, directing the investigation of the tannoids into a new course, and showing the imperfections of many of the so-called biological investigations. No excuse is needed for the publication of bibliographies of this character, other than is afforded by the papers referred to. In vegetable physiology, as in all other branches of the exact sciences, every experiment must be taken into account, although conclusions and theories undergo constant changes; and the reference to such experiments is very difficult without collected bibliographies dealing with each subject. Although the present list of papers is thought to be nearly complete, small omissions have probably crept in, and

those who know from experience how difficult it is to bring together references to the literature of any special Reprints lamed May 18,...
